

Juan Diego Garita Segura

Android Developer

I have 5 years of experience as a mobile developer, my carrier started with android development written in java for small startup companies in Costa Rica. Growing demands on other areas, I had started to learn about iOS development and Kotlin - architecture components as well. I have experience in Scrum and Kanban methodologies and truely believe in techniques as pair programming, TDD and others. As a team player, I have had the chance to work on CI/CD, so I feel very confident in working with those environments and working on automated builds. Finally, as TDD lover, I always try to increase the test coverage of any project that I'm working on by using unit and automation testing as required.

Work History

**2017-07 -
Current**

Mobile Developer

Trusona

- Work off of backlog to direct development activities and priorities
- Generate code that is easy-to-understand and effective
- Create code in an efficient and timely manner in order to maintain delivery and release deadlines
- Use TDD, automated testing procedures and self-review technics to ensure you are delivering the highest quality, bug-free code possible
- Work collaboratively across the existing development team and with each individual team member

**2016-11 -
2017-07**

Android Developer

Gorilla Logic

- Designed and developed an Android app in the medical area.
- Collaborated with cross-functional teams to define, design, and ship new features.
